

Why Do You Grow?

If you hear me out for just a second, I'll show you how the second most abundant element in the Earth's crust can be used in a special way to give you the sort of harvests that win competitions at the highest levels.

But first, I have to ask: Why do you grow? Is it to make money doing what you love? Is it to live an independent lifestyle? Escape the 9 to 5 in about the coolest way possible?

Is it because you're truly on fire about growing an even better harvest than the last... every time?

Then You Must Have This New Formula

If any of these ring true for you, then you must have this new formula in your arsenal. Why? Because it will help you to grow awe-inspiring plants. When your plants don't have to deal with pests, heat stress, powdery mildew or weak cell walls constantly... you won't believe your eyes come harvest time. In fact, don't be surprised if you find yourself doing a double take. Or calling your friends just to tell them how excited you are that you grew these plants.

Because the biggest problem you face when trying to grow truly awesome flowers is keeping your plants growing. That might sound silly, so let me explain: Of course your plants are growing until you harvest. But a lot of their energy can be wasted on repair and fighting off pathogens. If that happens, they don't grow nearly as much as they could have.

However, if you protect them from these threats, then they are free to do their best work. To grow huge and heavy without interruption. And they'll be strong enough to support the weight of your massive flowers. It's very simple to understand. The shortest distance between two points is a straight line. And every detour from that straight line, such as the set backs mentioned above, is energy wasted. It's unrealized potential. And that means you're losing money.

The Magic Ingredient

What makes this all possible is a special form of potassium silicate. Silica is the second most abundant element in the Earth's crust. When you use it correctly it's like putting chain mail armor around your plants cell walls. And with this new formula, it's even more effective because we've blended it with a proprietary mix

of ingredients that allows your plants to absorb the silica effortlessly.

RHINO SKIN

What's this formula called?

It's called Rhino Skin by Advanced Nutrients.

And when you use it in your growing medium, your roots can grow vigorous and strong. The stalks of your plants can grow thick and support shockingly heavy flowers. Your plants will laugh in the face of pests, heat stress, and powdery mildew.

What Makes Rhino Skin Different Than Other Silica Products?

Rhino Skin is the only silica supplement that so effectively delivers the silica to your plants so that your plants can use it.

That's what makes Rhino Skin different. There are other silica supplements out there. But no one else has spent so much time experimenting with and developing a method to make sure your plants can use the silica they're being fed. That's where our secret proprietary blend comes in.

Don't take our word for it.

We don't want you to feel like you're risking anything. So we're going to shoulder all the risk here.

Try Rhino Skin for yourself and see how much of a difference it will make in your garden. You'll be blown away.

We Guarantee It

Advanced Nutrients believes in RHINO SKIN so much, they guarantee, after your first crop cycle, you will be THRILLED and AMAZED with the difference it makes in your garden ... or ... if you're not satisfied ... you will get all your money back.

Because of this 100% money-back guarantee, you risk nothing when you visit your local hydroponics store and try RHINO SKIN today. Then, you can rest confidently knowing that you're giving your plants an abundance of a natural substance that encourages better, more satisfying harvests.

Read what growers are saying about Rhino Skin!

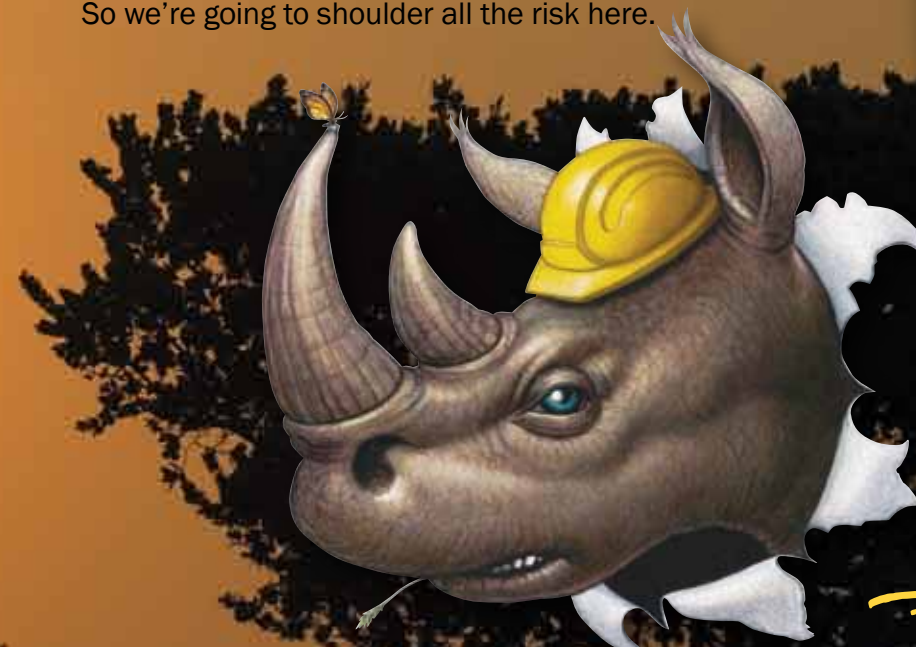

Blair, Chicago, Illinois "After years of battling against powdery mildew, including using a foliar fungicide, I found that your potassium silicate in Rhino Skin along with Piranha stopped it completely."

Heyday - Wir lieben Pflanzen "Kind regards from Vienna, Austria. Our plants look great, thanks to your fertilizer. Good business."

Gary, Memphis, Tennessee "I am a macrophotographer who photographs my crops. I can send you the pictures to prove that Rhino Skin increases the size and transparency of my glands. I changed lenses because I didn't need so much magnification."
