

WHY MOST HYDROPONIC ENZYME FORMULAS WON'T WORK

You may have heard of the benefits of adding enzymes to your hydroponics root zone ... but ... the truth is—a lot of hydroponics companies take shortcuts de-value their enzyme formulas.

Instead of developing a correct formula themselves, some companies outsource their manufacturing so they don't know what's in their enzyme products.

Cutting corners like this can greatly diminish the effectiveness of an enzyme formula!

Because when you want to deliver a guaranteed effective enzyme formula, great care must be taken in the design, development and manufacturing of the formula ...

HOW A PROPER ENZYME FORMULA GETS MADE ...

To start, you will want enzymes that have been specially extracted in professional laboratories ...

Scientists in these labs grow huge amounts of beneficial soil microbes, and then they ferment those microbes to get concentrated doses of enzymes. After that, the enzymes are tested individually and together to ensure they have maximum shelf life, viability and effectiveness.

For example, sometimes, an individual enzyme might not work so well with other enzymes, or a particular enzyme just cannot be kept active in solution ...

Also, great measures are taken to ensure the enzyme formula functions at full-strength in a wide-range of pH and temperatures in various hydroponics gardens.

With this in mind, after years of development, the scientists at Advanced Nutrients created an enzyme formula— SENSIZYM — to meet the exacting needs of demanding growers like us!

Read what growers are saying about SensiZym:

Jay, from Earlysville, Virginia "I started using SensiZym to get more out of Piranha, Voodoo and Tarantula. I saw that my veg phase plants grow faster now, and the roots are stronger. The rockwool is cleaner. This stuff works!"

April, 2011 (via e-mail)

Bryan Eichorn "Three Part, Big Bud, Overdrive, SensiZym, Bud Candy- Nuff said."

June 28, 2011

Luke, from Chico, California "To be honest, I have no idea what an enzyme is or what it does. I bought this because the hydro store guy said to when I was having problems with root rot. Well I don't have the root rot problems anymore and I also see that SensiZym made the plants bushier. So I think this is a great product for sure."

November, 2010 (via e-mail)

➔ FOLLOW THESE 3-STEP TO TRY SENSIZYM IN YOUR GARDEN TODAY, RISK-FREE

FIRST, visit your local hydroponics store and tell them you want to try SENSIZYM risk-free. (The hydroponics professional serving you will know exactly what you're talking about because he knows Advanced Nutrients stands behind ALL their products with a **100% satisfaction guarantee** —it either works for you or you get all your money back!)

SECOND, when you get home, apply SENSIZYM according to the simple directions on the label ...

THIRD, sit back and watch! After you've used SENSIZYM for one full crop cycle, it's time to enjoy the fruits of your labor ...

Watching the looks on your friends' faces as they enjoy your upgraded harvest will make it all worth it ... and ... you'll be glad you put SENSIZYM to use right away.
