

Higher Yields Start With A Strong Foundation ...

Now You Can Transform Your Valuable Garden Into A POWERHOUSE Of Abundance With This High Quality Root Maximizing Solution!

When you picture walking into your hydroponic garden and being absolutely amazed with the beautiful, aromatic flowers you see and smell... don't forget the start of it all; the moment you decided to invest in Tarantula: Liquid Bacterial Microbial Root Colonizer by Advanced Nutrients.

Did you know that when tarantulas molt, they can grow back lost limbs? It's true.

It's also true that they may sometimes eat their own discarded leg once they grow a new one... just to recycle the protein.

What does this have to do with your plants? Simple: Tarantula was designed to be absolutely ruthless in its efficiency as a bacterial microbial root colonizer.

The health and quality of your plant is largely dependant on the root zone.

Because Advanced Nutrients offers an iron-clad money back guarantee ... you have absolutely nothing to lose—so the logical choice is to try TARANTULA, an outstanding product for your plants' roots today.

Read what growers are saying about Tarantula:

 **Nathaniel, from Dearborn, Michigan** "The people at the hydro store said that I could stop some root hassles with this. They didn't say anything about getting larger flowers. I guess I was not expecting to see a bigger harvest. The only thing I did different was to start Tarantula in the middle of grow phase. So somehow what happened around the roots made the flowers larger in bloom!"
December, 2010

 **Jamie, from Seattle, Washington** "I live in a very damp climate and used to have lots of problems with roots going bad in my young plants. But after I started using your Tarantula I am having a lot more success and I wanted to thank you."
November, 2010

 **Seth, from Wasilla, Alaska** "I used to think it was great that we could have a sterile root zone in hydroponics. Then I realized that sterile means dead. There are good things that are supposed to be in the root zone. I had no idea that beneficial microbes are needed, but it's true."
